

Epson TM-T88V

Activating the internal USB interface

Operation of the FEED-button:

SHORT = a quick press of the button (less than 1 second)
LONG = pressing and holding the button (for more than 1 second)

Activate configuration mode

Please perform a self test (turn the printer on while pressing the FEED button). The current configuration will be printed out. To enter mode selection, please press the FEED button for more than one second. You have now activated the configuration mode.

User-defined properties

Please choose Option 3 (Customize Value Settings) by pressing the FEED button **3 x SHORT**, and then **1 x LONG** to confirm your menu choice.

Select interface

Select Option 10 (Interface Selection) by pressing the FEED button **10 x SHORT**, and then **1 x LONG** to confirm your menu choice.

Activate interface

If you wish to use the built-in USB, please choose Option 2 (Built-in USB) by pressing the FEED button **2 x SHORT**, and then **1 x LONG** to confirm your menu choice. Now the device is configured for the internal USB.

Done!

If you wish to change the interface later, you must change the configuration again. If you choose "Auto" then the external interface (UIB) will be chosen BEFORE the internal USB interface. Alternatively you can also take out the external interface; then the internal USB interface will automatically be chosen.
